1.Create a dense vector using Breeze and calculate its sum , mean and dot product with another vector

Code:

```
import breeze.linalg._

object Himanshu extends App {
  val A = DenseVector(1.0, 2.0, 3.0, 4.0, 5.0)
  val t = sum(A)
  val m = breeze.stats.mean(A)
  val B = DenseVector(5.0, 4.0, 3.0, 2.0, 1.0)
  val p = A dot B

  println(s"1st Vector : $A")
  println(s"Sum: $t")
  println(s"Mean: $m")
  println(s"2nd Vector : $B")
  println(s"Dot Product: $p")
  println("Himanshu S037")
}
```

Output:

1st Vector : DenseVector(1.0, 2.0, 3.0, 4.0, 5.0)

Sum: 15.0

Mean: 3.0

2nd Vector : DenseVector(5.0, 4.0, 3.0, 2.0, 1.0)

Dot Product: 35.0
