Practical – 3

Roll No. : S037	Name: Himanshu Shrivastav
Class : SYIT	Date/Time of Submission: 7-07-2026

1.Sort a dataset by a specific column and extract top 5 rows

Code:

```
object Himanshu{
  def main(args: Array[String]): Unit = {

    case class Person(name: String, age: Int, salary: Int)

    val p = List(
      Person("Ayush", 30, 50000),
      Person("Aman", 25, 48000),
      Person("Seema", 35, 70000),
      Person("Payal", 28, 60000),
      Person("Era", 40, 55000),
      Person("Fetish", 23, 45000)
    )

    val s = p.sortBy(_._3.salary)
    val top = s.take(5)
    top.foreach(println)
    println("Himanshu S037")
  }
}
```

Output:

```
Person(Seema,35,70000)
```

```
Person(Payal,28,60000)
```

```
Person(Era,40,55000)
```

```
Person(Ayush,30,50000)
```

```
Person(Aman,25,48000)
```

```
